COLOCATION

FROM OUR DATA CENTER IN KENOSHA, WI

OFFSITE's colocation service offers flexible configurations. Private data center suites, private cages, single racks, and half racks. All configurations have custom provisioned power with true A & B sides, extending from your equipment to separate UPS systems to separate backup generators.

OFFSITE uniquely offers hybrid colo / cloud configurations. Via fiber cross connect, customers can directly connect their collocated systems with hosts running in OFFSITE's private cloud environment. For public cloud applications, datacom options include Azure ExpressRoute and AWS Direct Connect. As a "carrier neutral" facility, customers always have the choice to provision datacom from the preferred carriers.

THE BENEFITS OF COLOCATION SERVICES INCLUDE:

Scalability: The ability to scale computing resources on demand, allowing you to adapt quickly to changing needs.

Security: We implement stringent physical and network security measures to protect the collocated equipment. Additionally, we include managed security services to further enhance the protection of your sensitive data.

Flexibility: You maintain control over your physical servers and equipment while taking advantage of our cloud resources. This allows for hybrid deployments and the ability to run workloads where they are most suitable.

National 10Gbps Network: OFFSITE's 10Gbps network provides secure Layer 2 or Layer 3, high-performance and redundant connectivity between all OFFSITE data center facilities, attached carrier hotels and direct, redundant connectivity to Microsoft Azure.

Audits & Compliance: We align to best practices frameworks to manage cybersecurity risks through core security controls, and we pass rigorous annual audits for HIPAA/HITECH, PCI-DSS, Type 2 SSAE 18 (SOC 1 and SOC 2), EU-US and Swiss-US Privacy Shield, and ISO/IEC 27001:2013.
