

MANAGED DETECTION AND RESPONSE (MDR)

Managed Detection Response or MDR is an advanced form of end-point protection that goes far beyond traditional anti-virus. Building on MDR to add data correlation, we also offer EDR and XDR, which aggregates log data and applies AI using both logs and threat feeds as inputs. OFFSITE's SOC Team integrates these tools to a SIEM for real-time incident alerting and static compliance reporting.

OFFSITE'S MDR SERVICES

- » Review or draft new security policies covering end-points
- » Generate tickets to track & remediate cyber-events
- » AI processing to detect & correlate suspicious behavior
- » Set traps for bad actors within your environment
- » Weekly executive reports from the OFFSITE analysts
- » Weekly customer meetings to review progress & next-steps
- » 24/7/365 alerting & response by our engineering team
